## General Pump Announces Hydraulic Flanges and Flanged Pump Models

General Pump announces hydraulic flanges and flanged models of pumps for direct drive to hydraulic motors. We have added hydraulic flanges for the T/TS (47) Series and TSP/TSF (66) Series pumps in a SAE Type "B" flange and coupler configuration. In addition, General Pump has also added pumps with hydraulic flanges in the SAE Type "A" configuration for three of the more common specifications of the TT/TP (51) Series, TC (60) Series and the TX (63) Series pumps. These pumps will now mount easily to a hydraulic motor with the matching SAE configuration. For more information please contact General Pump. Phone: 888-474-5487 or 651-454-6500. Fax: 800-535-1745. General Pump is a part of The Interpump Group, the world leaders in plunger pumps.
