## Fixed Chemical Injectors CPVC Body and Nozzle

#### INSTALLATION

This product is to be used with clean, fresh water. For different or corrosive liquids, contact GP Technical Service Department. With not clean liquids, appropriate filtration should be installed. Select the injector based on the nominal operating rating: system rated pressure, max flow and max temperature. Install valve with direction arrow pointing downstream. For proper operation a control device such as a dual lance wand, quick couple nozzles, or an adjustable nozzle holder must be used to lower the system pressure at the nozzle.

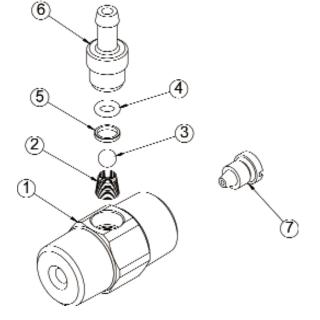

Under no circumstances should the pressure of the system exceed the maximum rated pressure of any component.

#### TROUBLESHOOTING

PROBLEM	CAUSE	SOLUTION
Injector will not draw liquid	Incorrect nozzle	Check and change nozzle
	System is not in low pressure mode	Change or adjust nozzle to put system in low pressure mode
	Discharge hose is too long	Reduce length of discharge hose or change injector*
	Chemical line is clogged	Clear chemical line of obstruction
Rate of draw seems too slow	Discharge hose is too long	Reduce length of discharge hose or change injector*
	Air leak in chemical line	Locate and repair leak
	Chemical is too viscous	Reduce chemical with water to decrease its viscosity
Chemical injector is leaking from hose barb	Obstruction in hose barb check-valve	Disassemble and remove obstruction
	Damaged o-ring in check-valve	Remove and replace o-ring
Excessive pressure load	Clogged injector	Clear injector orifice of obstruction
on pump, motor or engine	Improperly sized injector orifice	Change orifice*
